

The background of the advertisement features a close-up photograph of several vertical, cylindrical metal coils with a ribbed texture, likely part of a gas plant. The coils are arranged in a row and show signs of being cleaned, with some areas appearing smoother and more reflective than others. The overall color palette is dominated by the metallic grays of the coils and the blue and orange branding elements.

*Gas Plant  
Coil Cleaning*

## *Pressure Washing With Dry Ice*

### **No Mess**

Dry Ice (CO<sub>2</sub>) changes to a vapour upon impact, leaving only the dust and debris to fly out the other side!

### **No Damage**

Our process grinds the dry ice to a mist – meaning no damage to delicate cooler fins!

### **No Water**

Dry Ice (CO<sub>2</sub>) is water free and non-conductive - meaning no more downtime for drying!

### **No Bacteria**

This process is chemical free, worker safe and environmentally friendly!

*Better than pressure washing, without the damage or mess!*

*Reduce maintenance time and energy usage while adding life to equipment*

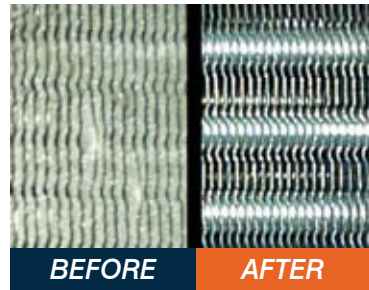

## Gas Plant Coil Cleaning

Unplugs and cleans heat exchanger coils, chiller coils, evaporator coils, condenser coils, air exchanger coils, generator fan coils and more!

## Why Choose Scrub Zero Dry Ice Blasting?

Since 2005, we have provided mobile dry ice blast cleaning services and have not strayed from our focus in becoming experts in our field. Unlike other service companies, where CO2 cleaning is an add-on, this is ALL we do. Our technicians are experts in using the latest equipment the technology has to offer for the industries we serve.

In addition to Scrub Zero being **SECOR Certified**, we are **CanQual Approved**, and our technicians are fully certified in all safety courses necessary for working in any environment. Call Scrub Zero today!
